A Systems Management solution allows you to manage your computers & servers **centrally** with a **single pane-of-glass management**.

1. Remote Control
2. Live Connect
3. Inventory and Audit
4. Unlimited Administrators

FEATURES

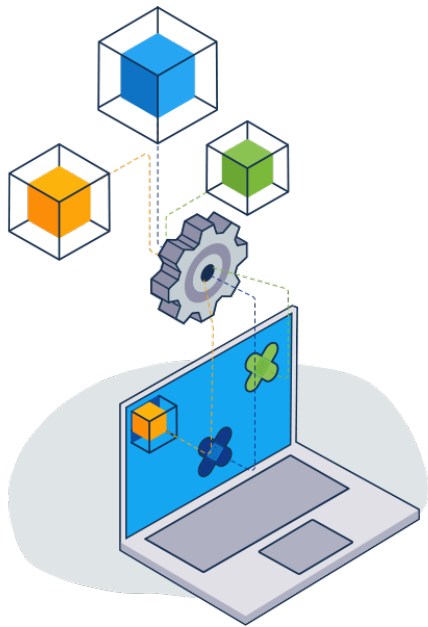

Remote Control

Enables technicians and administrators to remotely troubleshoot and manage end user computers regardless of their location.

Quickly access endpoints to proactively resolve issues. Manage all client devices for issue resolution, reporting, incident resolution and compliance.

FEATURES

Live Connect

This stealth-mode remote control tool features an array of gadgets to help maximise service quality and IT efficiency without disturbing end-users.

Access the task manager, command shell, registry editor, transfer files, chat and do a lot more.

Do this in the background without interrupting users!

FEATURES

Audit & Inventory

Without proper inventory data, audits can be challenging and time-consuming.

Kaseya VSA Lite's Audit and Inventory feature provides you the visibility you need to gather detailed data for audits of all your endpoints in near real-time.

FEATURES

Unlimited Administrators & Sessions

Some solutions place limits on how many administrators you can have, or on the number of concurrent sessions.

Break free, use Kaseya VSA Lite and give your engineers a sense of freedom to truly deliver value.
